

Company Knowledge and Internal Agents

Your team gets an answer with its source, and routine work moves forward.

Sound familiar?

- New hires take too long to get up to speed.
- I want ChatGPT that knows our documents.
- We waste time looking for documents and statuses.

First stage

One knowledge area and an assistant for one team; then agents and the AI workspace for your team.

Ongoing support

Knowledge base updates, new agents and connections, review of employees' questions.

What you receive

- Organized sources and a company wiki.
- Search with sources and access rights.
- An internal company assistant in your team's channel.
- Agents for agreed tasks, with an action log.
- An AI workspace for your team: connections, rules, a task library.
- A schedule for updating the knowledge base.
- Instructions for staff and the administrator.

System on the shared core

Data	Agents	Connections	Control	Interfaces
Documents, procedures, correspondence, data	Internal company assistant	Claude, ChatGPT and coding agents via connectors and MCP	Access rights	Company wiki and search

Experience

For NF ELIT, I created and implemented an internal company assistant connected to company materials and real databases.
