

Turnkey Digital Solutions

Your outsourced AI department

Denis Ostapenko

The work between the tools

The catalog lives in one place, customer questions arrive elsewhere, and someone still has to carry information between them. Choosing the tools and coordinating the work takes time.

01 **Catalog**

02 **Customer inquiries**

03 **Company
documents**

04 **Content**

05 **Reports**

One working system

You describe the business task. I design the path, connect the tools, build what is missing and take responsibility for the complete result.

The shared core

Seven directions use the same five layers. A new capability can build on the data and connections already in place.

01	Data	Documents, catalogs and operational records
02	Agents	Models and agents working with that information
03	Connections	CRM, store, email and business systems
04	Control	Approval, checks, logs and reports
05	Interfaces	Website, messaging, phone and apps

Seven directions

01 Sales Systems

Your customer gets an answer and places an order without waiting for a sales rep.

03 Company Knowledge and Internal Agents

Your team gets an answer with its source, and routine work moves forward.

05 Brand Voice and Content Production

Your company or expertise has a recognizable voice, with content going out on schedule.

07 AI Personas

A character with a personality of its own, living in your product and growing with it.

02 Outsourced Online Store

Storefront, catalog, orders and content, with one person responsible for the whole operation.

04 Business Process Automation

The system handles emails, documents, orders and shipments. People make the decisions.

06 Interactive Apps

Your subject, method or product becomes an app people can use every day.

Systems that grow together

Illustrative combinations. The concept defines the scope for your company.

01 Store + sales + content

Product information reaches the storefront, the assistant and the publishing routine.

02 Knowledge + process automation

Company information supports answers and agreed actions in operational systems.

03 Apps + AI personas

An interactive product gives a character a role, a place to act and scenarios to test.

How the work moves forward

01

Describe the task

Send me a message or an audio recording in your own words. Tell me what needs to happen, who will use the result and what gets in the way today. I clarify the details and put together the brief; source files can come later.

02

Receive my proposal

Within 48 hours of the brief, I send an initial concept. I choose the technology stack and explain how the system will work, what is included, the delivery stages, timing and cost.

03

Agree on the scope

You review the proposal and ask questions or request changes. We confirm the result, scope, price and acceptance criteria in writing, so you know what you are paying for.

04

Start the first stage

Once we agree, you pay for the first stage and provide the access and materials it needs. I confirm the start date and the plan. Each following stage is paid before it begins.

05

Build in stages

I connect the data, tools and interfaces, build what is missing and show you progress through previews and a short weekly report. We agree on the cost and timing of any new requests before adding them.

06

Test real scenarios

We check the complete path, including exceptions and the points where a person must decide. Acceptance is tied to the agreed scenarios.

07

Launch and hand over

08

Keep it working

Try the demo company

Seven fictional scenarios show how the parts connect. Open a demo, try its controls and follow the result.

01 Sales Systems

02 Outsourced Online Store

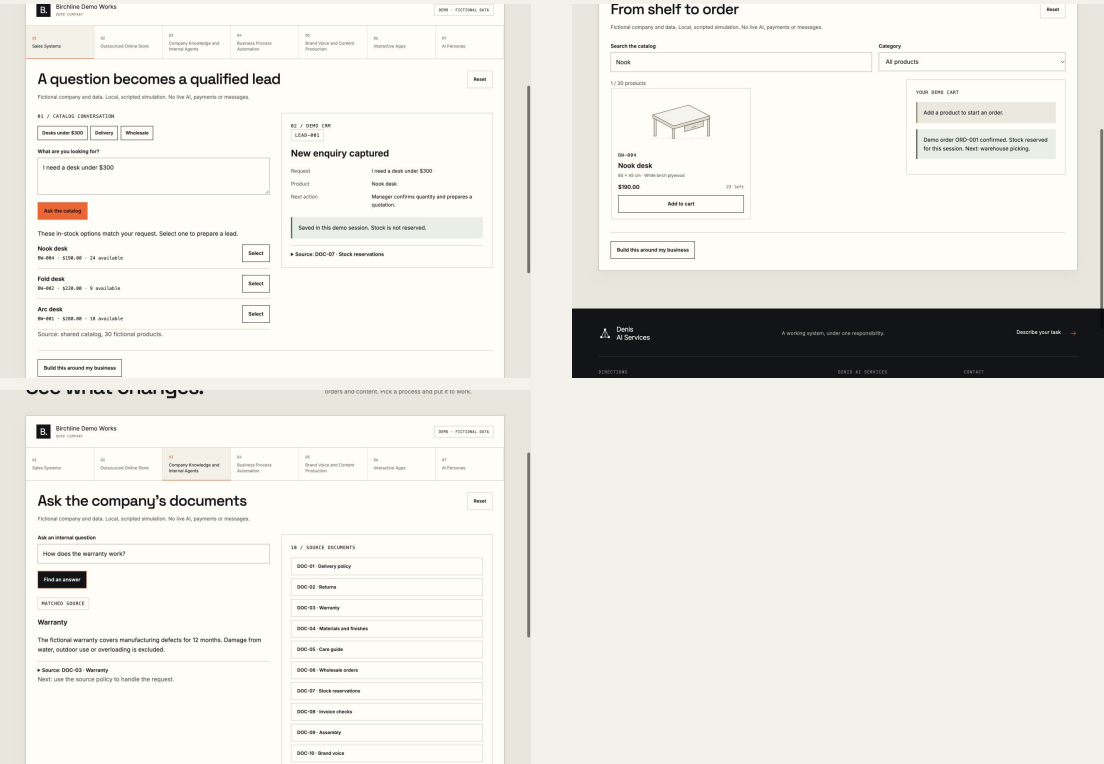

03 Company Knowledge and Internal Agents

04 Business Process Automation

05 Brand Voice and Content Production

06 Interactive Apps

07 AI Personas

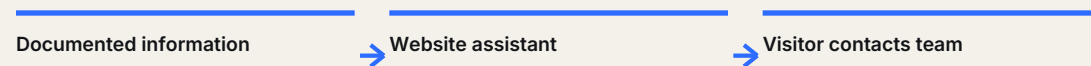

Scenario demos with fictional data. No live AI model or real transactions.

Implemented work

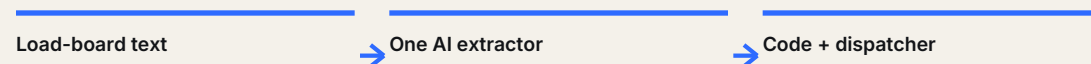

NF ELIT website assistant

NF ELIT has an implemented website assistant for explaining its materials and services. When a request needs the team, the visitor follows the contact link and submits it directly.

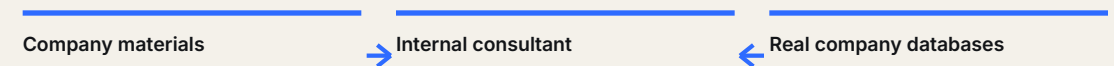

NF Prime

NF Prime automatically builds load plans around equipment constraints, payment terms and the pickup and delivery sequence. Version 11.0 uses one AI extractor; the remaining pipeline is code.

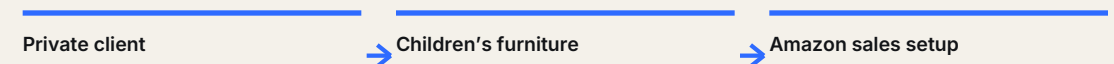

NF ELIT internal assistant

An internal consultant connected to NF ELIT's materials and real databases was created and implemented.

Children's furniture on Amazon

The complete Amazon sales setup was delivered for a private client selling children's furniture made from eco-friendly birch plywood.

Working terms

01 Payment by stage

Scope and cost are agreed before the build.

03 You own the result

Code, accounts, data, access and instructions are handed over.

02 Acceptance by scenario

We test the complete path, including exceptions.

04 Ongoing support

An agreed support scope and a monthly report of the work.

Denis Ostapenko

I build AI systems for the company I work at every day.

Website and internal assistants for NF ELIT.

NF Prime for freight dispatch.

Amazon sales setup, interactive applications and AI personas for the Brazilian market.
